Attn: Mr Udi Siboni

To whom it may concern,

Tadigar Ltd., Carrier's distributor in Israel, confirms that CQM's Automatic Condenser Tube Cleaning Systems are being used on Carrier Chillers in our local market for over four years.

It refers to chillers with cooling capacity of 150 TR and above (reciprocal, screw, and centrifugal compressors' chillers).

According to our experience for this period, the systems were found to be very efficient in keeping the condenser's tubes clean and keeping the chillers operating most efficiently.

This specific ball cleaning technology doesn't cause erosion or other damages to the tubes.

Due to our very good experience, we strongly recommend the use of CQM as the best solution we know for heat exchanges pipes cleaning.

Sincerely,

A handwritten signature in blue ink, appearing to read "M. Bialer".

M. Bialer, General Manager,
