## Recommendation - To whom it may concern

In "ENERGETIKA TŘINEC  
Průmyslová 1024  
73695 Třinec 1 – Staré město  
CZECH REPUBLIC"

Till today, 8 ATCS systems (Automatic Tube Cleaning System) for cleaning the condenser of the Power Plant, were installed. The machines were installed gradually while checking compliance of efficiency and savings targets. These systems were installed on condensers of turbines produced by Siemens & Skoda.

- First, the system ATCS of C.Q.M. in diameter of 10" was installed on condenser of turbo compressor, in the year 2004.
- After operating a period of a year and in light of the excellent results, we decided to expand cooperation with C.Q.M. and installed ATCS systems in all the power plant condensers.
- The second stage was to install ATCS system on turbo generator, machine in diameter of 16" and machine in diameter of 22".
- A year later, we installed ATCS systems at TD-11 & at TG-2, 1 machines in diameter of 24".
- Two years ago, 3 more systems of ATCS in diameter of 10", 16", 24" were installed on condensers of turbomachines.

We would like to note that the systems work well throughout the period, setting out to excellence and the most satisfactory.

Sincerely

Jan Cepec  
Technical director  
Energetika Trinec, a.s.  
Czech Republic
