Re: CQM systems in cooling brine units at Bromine Compounds, Ramat Hovav

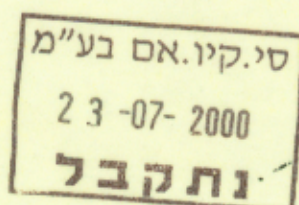

In 1997 CQM combined system was installed in the condenser and oil cooler in an ammonia refrigeration cooling brine unit which used in the utilities production plant.

After commissioning some checks have been made by the plant engineer and a detailed comparative report was published. This report shows that there is a remarkable money saving and a one year investment refund that stemming from the using of CQM systems.

In 1999 10 more CQM systems for cleaning ammonia refrigeration cooling brine condensers, and 10 more CQM systems for the oil cooler were installed.

After the first work year I can say that we returned our investment in those systems. At list \$150,000 were saved in energy this year by using CQM systems, and I think that after doing the final account will be higher due to the decrease in maintenance and cleaning costs.

We are very pleased from the functioning of the CQM systems, and we are recommending buying those systems.

Best regards,

Arnie Dahan

Head of Industrial Utilities Plant
