**Re: Reference letter**

CQM have installed a system for cleaning the chillers in our factory in Jerusalem in 1996. The system was installed on the chillers of the two cooling units.

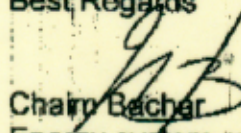

From time to time, the chillers were opened for inspection and found completely clean.

Also, based on the records of the chiller in the last 7 years, we see that the productivity is kept at its maximum and there is no increase in pressure even in the hottest days.

The working relations between CQM and us are excellent; the service is prompt, efficient and sincere. Each request is handled to our full satisfaction.

The decision to purchase CQM was right.

Best Regards
